TESTED and PROVEN

MAXIMUM FREEDOM FROM WEEDS

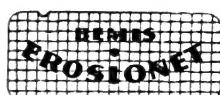

HIGH GERMINATION and PURITY

The Satisfaction of a Perfect Lawn

A fine lawn is obtained by the careful and exact fulfillment of three fundamental requirements. Preparation of the seed bed, the use of good grass seed and the proper maintenance of the turf once established. These three factors are of equal importance, and failure to meet the requirements of any of these will make the efforts expended on the other two of little avail. **Burnett Bros. Inc.**, with a reputation of supplying grass seeds of the highest quality for a period of over 40 years, assume the responsibility of furnishing good seed. We guarantee you will find a beautiful lawn easily obtainable if certain simple but essential rules are followed in its creation and maintenance. Our literature on Lawns is yours for the asking.

WHITE CLOVER in your Lawn?

Many people object to the appearance of Clover in their lawns, preferring just the uniform all-grass texture. For this reason we do not put it in our mixtures (except Permanent Turf). If desired, it should be sown separately. Prices listed on page 3.

Sow Killarney LAWN SEED and Walk on Velvet

Killarney is an up-to-date quality Lawn Seed Mixture composed of the finest imported and domestic grasses especially adapted for lawns in the northern United States. PERMANENT TURF

Our highest quality, all-purpose formula that will produce the finest and most permanent lawn possible. In sun or shade—good or poor soil. Prepared especially for Chinch Bug infested areas.

Many beautiful lawns throughout certain areas of the eastern coast of the United States and elsewhere have been completely destroyed as a result of the extensive ravages of a recent lawn pest, the Chinch Bug. This bug is of the sucking insect type and does its damage to lawns by piercing the grass blades and shoots near the soil level and sucking out the juices of the grass.

Certain grasses have been found to be highly resistant to the attacks of this insect and it is a careful blending of these grasses that make up our "Permanent Turf," containing 70% Permanent Lawn Grasses.

Such lawn grasses as **Redtop** and **Bents** which are subject to the ravages of the Chinch Bug are not included in this mixture.

Permanent Turf (no Clover). 2½ lbs. \$8.60, 5 lbs. \$6.95, 12½ lbs. \$16.50, 25 lbs. \$32.00, 50 lbs. \$62.50.

STRAWBERRY PLANTS—POT GROWN

Strawberry Plants are not difficult to grow and readily adapt themselves to a great variety of soils and climates. Pot-grown plants can be set out in the field at any time during the Spring or late Summer and early Fall months, as their strong, fibrous roots take hold quickly in new location, and can be depended upon to produce bigger crops of larger berries than field-grown layer plants.

A careful selection of varieties will insure fresh berries in the garden from early June until late Fall. This can be accomplished by choosing an **early**, a **midseason** and a **late** fruiting type as

Strawberry Culture

PREPARATION OF SOIL

Dig bed for your plants to a depth of 14 inches and incorporate well rotted manure (not fresh manure) or decomposed leaves with the soil. Afterwards scatter Bonemeal on each bed, raking it well into the surface.

PLANTING INSTRUCTIONS

When plants arrive, unpack at once and place in a shady spot, sprinkling them lightly with water. After hot sun has gone down in early evening, dip each root ball in a pail of water and loosen the soil with the fingers. Be careful not to knock soil from the roots. When planting, set the plants 1 foot apart in the row, spacing the rows 2 feet apart. Plants need a minimum of 6 hours sun a day so do not plant in very shaded location.

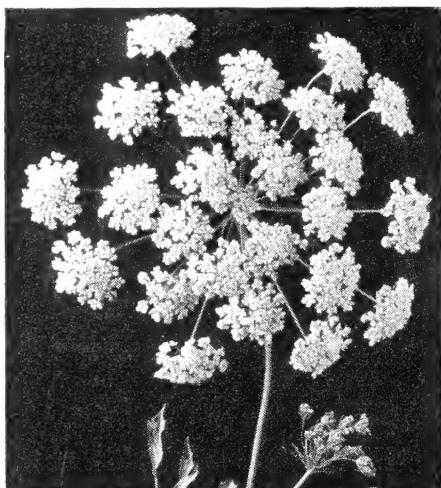

RULES FOR SUCCESS

Most important rule is to keep weeds down by cultivating which will also loosen the soil, preserve moisture and induce healthy growth. If good, clean salt hay is available it is advisable to mulch the entire bed about the time green berries are forming, working hay well under the leaves. This practice keeps down weeds during fruiting season, keeps berries clean and free from rot and preserves soil moisture. In early Winter mulch the beds with a light covering of coarse manure, evergreen boughs, salt hay or similar material.

Giant Single Asters—Artistic and Graceful Cutflowers

BURNETT'S BEAUTIFUL ASTERS

The introduction of a Wilt-resistant strain of Asters of recent years has helped tremendously in restoring this beautiful flower to popular favor as a garden plant. Up until the time of the origination of this resistant strain, garden enthusiasts were becoming discouraged trying to grow Asters outdoors with the wilt-disease so prevalent. The appearance of this new strain has again awakened interest in the culture of Asters.

For best results the ground cannot be too richly prepared. Plants from seed sown in the open ground in May will bloom in September and October. For July and August flowers, sow in March or April in cold frames or hotbeds. We especially recommend the following as being the best for cutting and general garden use.

ASPARAGUS, Pedigreed Washington

HOME CANNING BOOK

A real "must" book for the home gardener. Modern guide to efficient Pickling—Preserving—Dehydrating.
By Anne Pierce—\$1.50

ASPARAGUS ROOTS

Can be planted either in Spring or Fall.

Culture—To make a permanent Asparagus bed, the ground should be trenched deeply and well drained. The trench should be filled up with a rich compost of well-rotted manure and loam. Set roots 12 inches apart in the rows, allowing 2 to 3 feet between rows, spreading out and separating the roots carefully so that the crown will be covered with about 6 inches of soil. In November, when the stalks have been cleared away, give the bed a good top-dressing. In early Spring a liberal application of agricultural salt will be beneficial.

Pedigreed Washington. High quality strain developed by the U. S. Dept. of Agriculture. It is rust-resistant and produces large, straight, dark green shoots with tight, firm tips which do not open until well out of the ground. Strong, 2-year-old roots \$1.75 per 25, \$6.50 per 100, \$50.00 per 1000. Extra large, selected, 3-yr.-old roots, \$2.50 per 25, \$9.00 per 100, \$75.00 per 1000

GARDEN PEAS

Peas do best in a light, rich soil; for private use sow in double rows 6 to 8 inches apart, the rows 2 to 4 feet apart, the tall ones requiring brush. Commence sowing the extra early varieties as soon as the ground can be worked in March; continue for a succession every two weeks until June. A good crop can be secured by sowing the extra early sorts in August for Fall use. Transplant to the open ground when all danger of frost is past, setting the plants 3 to 4 feet apart each way. Sufficient plants for a small garden may be started by sowing a few seeds in a shallow box or flower pot, and placing it in a sunny window of the room or kitchen. By training the vines on trellises or tying to stakes the fruit will ripen better and be of finer quality.

New! BURNETT'S PERENNIALS Versatile!

OUR OWN OUTSTANDING INTRODUCTION and SELECTED FAVORITES

Our perennial plants are all strong, field-grown or potted stock. They are **vigorous, young plants** that will readily establish themselves permanently in your garden. Do not buy perennial plants by size alone. Large, old clumps are never satisfactory and will soon die out when transplanted. **Plants are not sold in any quantities less than those priced.** 5 plants of any one variety are sold at the 10 rate. Take advantage of this saving over the smaller quantities.

Cultural Hints—Never plant Hardy Perennials too deep, and as a rule they prefer a well-drained, loamy soil that is neutral or slightly alkaline. Poor soil should be well prepared beforehand by digging in well-rotted manure with bonemeal added if possible. When fertilizing make sure no commercial fertilizers ever come in direct contact with plant as this will burn young roots and lower foliage. Keep weeds down and soil loose around plants by frequent cultivation. **Purchaser pays transportation charges on all plants.**
